

Docker and application setup

```
MINGW64/c/Users/vijayk/git/docker-samples
vijayk@DESKTOP-0H5LGCQ MINGW64 ~/git/docker-samples (master)
$ docker --help

Usage: docker [OPTIONS] COMMAND

A self-sufficient runtime for containers

Options:
  --config string      Location of client config files (default
                        "C:\\Users\\vijayk\\.docker")
  -c, --context string  Name of the context to use to connect to the
                        daemon (overrides DOCKER_HOST env var and
                        default context set with "docker context use")
  -D, --debug           Enable debug mode
  -H, --host list       Daemon socket(s) to connect to
  -l, --log-level string Set the logging level
                        ("debug"|"info"|"warn"|"error"|"fatal")
                        (default "info")
  --tls                Use TLS; implied by --tlsverify
  --tlscacert string    Trust certs signed only by this CA (default
                        "C:\\Users\\vijayk\\.docker\\ca.pem")
  --tlscert string       Path to TLS certificate file (default
                        "C:\\Users\\vijayk\\.docker\\cert.pem")
  --tlskey string        Path to TLS key file (default
                        "C:\\Users\\vijayk\\.docker\\key.pem")
  --tlsverify           Use TLS and verify the remote
  -v, --version          Print version information and quit

Management Commands:
  builder      Manage builds
  config        Manage Docker configs
  container     Manage containers
  context       Manage contexts
  image         Manage images
  network       Manage networks
  node          Manage Swarm nodes
  plugin        Manage plugins
  secret        Manage Docker secrets
  service       Manage services
  stack         Manage Docker stacks
  swarm         Manage Swarm
  system        Manage Docker
  trust         Manage trust on Docker images
  volume        Manage volumes

Commands:
  attach        Attach local standard input, output, and error streams to a running container
  build          Build an image from a Dockerfile
```

```
